

AREMIS DAYS 15 & 16 NOV 2017 – DISCOVERY LABS

- **Business Intelligence for IWMS | AGILOS**
Business Intelligence is the software segment dedicated to the extraction and presentation of data to better support analyses and decisions.
This lab will showcase how a leading BI solution (Qlik Sense®) can leverage an IWMS platform (ARCHIBUS)..
- **Latest ARCHIBUS Innovations | AREMIS**
Discover the new ARCHIBUS Version 23.2 that helps organizations streamline their space occupancy, from strategic space planning to move management including future layout scenarios, all in a graphical and intuitive way.
- **Bezettingsmeting – een pragmatische oplossing | eFM**
Because of the development of New Ways of Working, especially Activity-Based Workplace and tele-working, space occupancy becomes more complex to measure and to anticipate, with serious risks of over- or under-density. A wide range of technologies are constantly appearing on the market with strong promises that generally feed ‘inflated expectations’. Let’s have a look at a pragmatic solution to avoid large scale hardware deployment and provide reliable indicators.
- **Een BIM standaard aangepast aan de behoeften van de exploitatiefase | AREMIS**
BIM (Building Information Modelling) datasets are generally structured and organized to improve the ‘design and build’ phase in a building’s lifecycle. What do you exactly need in your BIM model to efficiently support the ‘manage and maintain’ phase?
